The connection you can trust.

The Connection you can trust

Philmac is a global leader in the design and manufacture of specialist fittings and valves for polyethylene pipelines.

With a strong pedigree in product innovation, Philmac revolutionized how to connect polyethylene (PE) pipes by developing the world's first all plastic compression fitting back in 1968. Philmac products are now seen as the international benchmark in quality and design.

The exceptional quality and unique design of Philmac products has driven a strong expansion into global markets, where today Philmac exports around 50% of its production

output to more than 30 countries in regions such as North and Central America, the UK, Ireland, Europe and Asia. Philmac has had a long and proud history exporting its products throughout the Middle East, and is active in the UAE, Oman, Bahrain, Jordan and Qatar.

Philmac is proudly part of the Aliaxis group, the world's largest integrated supplier of high performance plastic pipe systems.

With pipe connection solutions for irrigation, mains water supply, gas and mining applications, Philmac is the connection you can trust.

The connection you can trust.

3G[®] Metric/Imperial[™] Compression Fittings

The universal fitting for both metric and imperial PE pipe.

The Philmac Metric/Imperial[™] compression fitting is a revolutionary step forward for PE pipe jointing. Connections can now be made to both Metric (BS6572/BS6730) and Imperial PE pipe (BS1972/3284 and IRS 135 Heavy Gauge) from the one fitting from either end. And, the innovative design means that inserts are no longer required to connect imperial pipe.

Metric/Imperial[™] provides the ultimate in flexibility, reducing both inventory and complexity.

Flexibility

With one fitting you can connect to both Metric and Imperial PE pipe (BS1972/3284 and IRS 135 Heavy Gauge). The innovative design means that inserts are no longer required to connect to imperial pipe. It also removes the need for dedicated fitting and inserts providing the ultimate in flexibility.

Made from Advanced Materials

The fitting is manufactured from lightweight, high performance thermoplastic materials with outstanding impact, UV and corrosion resistance. The materials used are non-toxic and taint free.

Choose from a wide selection of fittings (from 16mm to 63mm) including straight and reducing joiners and tees, elbows, end connectors, caps and blanking plugs.

No loose components

Grip ring and seal remain captive in the body when the nut is removed.

Minimal pipe twist

The fitting is designed to minimise pipe twist, reducing the risk of untightening joints.

Slide and Tighten[®]

Incorporating all the benefits of Slide and Tighten[®] technology with 100% positive feedback.

Pressure Rating

Metric Imperial fittings are rated to PN16.

Compact Size

The size of Metric fittings has been kept to a minimum making this fitting ideal to use in compact spaces.

Disassembly

The fitting has been designed so the grip ring is released as the nut is backed off, enabling the pipe to be simply pulled out of the fitting.

1 Cut the pipe square. There is no need to chamfer or lubricate the pipe.

2 Ensure 2 threads are showing and simply slide the pipe in until the first point of resistance is felt.

3 Tighten the nut by hand, and then firmly with a wrench.

3G[®] Metric Compression Fittings

Dedicated Metric fittings that provide a connection you can trust

3G[®] Metric fittings are the perfect choice to connect metric sized polyethylene pipe thanks to Philmac's unique **Slide and Tighten[®]** technology. Each fitting is pre-assembled and ready to use so there's no need to disassemble the fittings or prepare the pipe prior to use. Simply cut the PE pipe square and slide it into the fitting until you feel the first point of resistance and then tighten the nut to the flange on the body of the fitting.

With Philmac's 3G[®] Metric compression fittings, just slide and tighten and the job's done!

Visual stop

The flange on the body of the fitting acts as a visual cue to indicate when the nut is fully tightened. Once the nut touches the flange on the body, the fitting is in a fully tightened state.

Minimal pipe twist

The fitting is designed to minimise pipe twist, reducing the risk of untightening joints.

No loose components

Grip ring and seal remain captive in the body when the nut is removed.

Interchangeability

Safelok[®] and 3G[®] Metric components are all interchangeable as they share a common body.

Made from Advanced Materials

The fitting is manufactured from lightweight, high performance thermoplastic materials with outstanding impact, UV and corrosion resistance. The materials used are non-toxic and taint free.

Choose from a wide selection of fittings (from 16mm to 63mm) including straight and reducing joiners and tees, elbows, end connectors, caps and blanking plugs.

Slide and Tighten[®]

Incorporating all the benefits of **Slide and Tighten[®]** technology with 100% positive feedback.

Pressure Rating

3G[®] Metric fittings are rated to PN16.

Compact Size

The size of Metric fittings has been kept to a minimum making this fitting ideal to use in compact spaces.

Disassembly

The fitting has been designed so the grip ring is released as the nut is backed off, enabling the pipe to be simply pulled out of the fitting.

1 Cut the pipe square. There is no need to chamfer or lubricate the pipe.

2 Ensure 2 threads are showing and simply slide the pipe in until the first point of resistance is felt.

3 Tighten the nut by hand, and then with a wrench to the point where the nut is touching the flange on the body of the fitting. Do not tighten beyond this point.

Safelok® Metric Compression Fittings

Slide and Tighten® for a reliable connection up to 110mm

Safelok® Metric compression fittings are the fitting of choice for industrial applications, where Metric PE pipe is carrying media with chemical, compressed air or dirty water. While the Safelok® Metric range has been designed for industrial applications it works equally well in any application where Metric PE pipe is used in sizes up to 110mm including irrigation and civil applications.

Slide and Tighten®

No pipe preparation is needed and no force is required to push the pipe past the seal. Simply insert the pipe into the fitting until the first point of resistance is felt and then tighten the nut until it touches the flange on the fitting body.

Air line safety

In the event that work commences on a live air line the use of Philmac Safelok® Metric Compression fittings will ensure that a warning is given to the user that the line is live. This is because tightening the nut creates the seal. As the nut is loosened the seal is relaxed causing a loud release of air but the grip is maintained on the pipe.

Choose from a wide selection of fittings (from 20mm to 110mm) including straight and reducing joiners and tees, elbows, end connectors, caps and blanking plugs.

Visual stop

The flange on the body of the fitting acts as a visual cue to indicate when the nut is fully tightened. Once the nut touches the flange on the body, the fitting is in a fully tightened state.

Rated to PN16

Product is rated to PN16 across the range.

No loose components

Although disassembly of the fitting is not required, if the nut is removed there is no danger of losing components as they are all retained within the nut.

Impact Resistance

Safelok® Metric Compression fittings are made from a high grade of polypropylene to provide significant resistance to impact.

Chemical Resistance

Safelok® Metric Compression fittings are supplied with EPDM seals as standard which means that the fitting can withstand a wide range of chemicals (including many acids) without the need for an additional kit. Alternative seal materials are available as a kit if required.

1 Cut the pipe square. There is no need to chamfer or lubricate the pipe. Ensure 3 threads are showing.

2 Slide the pipe into the fitting until the first point of contact is felt. There is no need to force the pipe in.

3 Tighten the nut by hand (up to 25mm) or with a wrench.

4 Fitting is fully tightened when the nut butts against the flange of the body.

Universal Transition Coupling (UTC®)

The Swiss army knife of pipe fittings provides the ultimate connection you can trust

The Philmac UTC® (Universal Transition Coupling) is a unique range of mechanical compression fittings that provides the ultimate in pipe connection flexibility.

Without modification the same fitting connects to a variety of materials including PVC, copper, galvanised iron, ABS, lead, stainless steel and polyethylene. Each size fitting covers a range of pipe diameters providing a “Universal” solution.

Easy disassembly

The design of the UTC® means that once the nut is backed off the pipe can easily be removed from the fitting.

Fast and easy installation

The Philmac UTC® incorporates all the benefits of Philmac *Slide and Tighten*® technology. Simply witness mark the pipe against the flange on the body of fitting, and then insert the pipe to the correct depth. The nut can then be tightened using a wrench. The UTC® is fully installed when the nut can no longer be tightened with reasonable force.

Complete flexibility

Through its wide sealing tolerance, the Philmac UTC® is designed to accommodate a range of different outside diameters across most pipe materials (including PVC, copper, galvanised iron, ABS, lead, stainless steel, steel and PE).

No loose components

The Philmac UTC® is fully integrated with no loose components. There is no need for individual assembly of a split ring, sealing ring or nut. All that is required is the insertion of the pipe and tightening the nut.

High Performance Materials

The Philmac UTC® is manufactured from lightweight high performance thermoplastic materials with outstanding impact, UV, chemical and corrosion resistance. The Philmac UTC® is rated to 1250 kPa to meet the needs of high pressure systems.

Outstanding Sealing Performance

The uniquely designed oversized seal enables sealing on out of round and pitted pipes.

1 The fitting is pre-assembled and ready to use. Cut pipe square and to length using the flange on the central body as a guide. Ensure the end of connecting pipe is undamaged and clean.

2 To ensure adequate insertion depth, witness mark the pipe to the back of the flange.

3 Insert the pipe to the correct depth. Always ensure the nut is backed off and 3 threads are showing. Pipes at the top end of the fitting tolerance may require 5 threads showing.

4 Tighten nut firmly with a wrench. Nut will not butt against the body flange when the pipe size is at the top end of the fitting tolerance.

Ball Valves

The Ball Valve you can trust for years of reliable service

The Philmac blue handled ball valve has been servicing the rural and irrigation markets for over 30 years. The distinctive blue easy grip handle is recognised in the market as the industry standard providing users with the confidence of a strong, reliable and robust product.

Proudly made in Australia, the Philmac blue handled ball valve is based on a simple on/off action and is quick and easy to install allowing the user full control of water distribution.

Easy Action
The handle is not only easy to operate but has a positive on/off action through 90°. It is ergonomically designed to enable easy gripping

UV Stabilised
Proven performance in extreme UV conditions.

Visual Indicator
When in the closed position the blue handle is at 90° to the body and when in the open position it is in line with the body clearly indicating if the valve is open or closed.

Install in any Direction
To assist with installation Philmac ball valves can work in any direction and at any angle.

Robust Construction
Built to withstand pressures up to 1600 kPa and provide years of reliable operation.

Quality Materials
High quality injection moulded plastic bodies and components plus NBR O-rings and stainless steel screws means years of reliable operation.

Approvals
All blue handled ball valves carry Standardsmark approval.

1 Apply PTFE tape or approved sealant to the male thread. Sufficient tape needs to be applied to ensure a watertight seal.

2 Screw on to a male or female thread by hand until firm.

3 Using a pipe wrench or multi-grips on the end caps only, further screw the ball valve until tight. Where necessary, ensure the thread is held stationary to avoid it from moving. Do not use pipe wrench or multi-grips on the body of the valve.

Foot and Non-Return Valves

The valve you can trust to keep your pumps primed

Philmac foot and non-return valves have been successfully servicing the rural and irrigation markets for more than 20 years with a reputation for quality and reliability.

Now available in a new and improved format, the new model retains all of the benefits of the previous model, but with further improvements in the lifespan of components (particularly the piston) and the flow rates of water through the valve.

Easily converted into a foot valve with the addition of a filter, the Philmac Non-Return and Foot Valve is the perfect choice for preventing back flow so pipelines do not drain and cause damage to high value equipment such as pumps.

Low Pressure Shut-off

Designed to seal off at 20 kPa making them well suited to gravity feed systems.

Multi-position Installation

The valves have been designed to work in either vertical or horizontal position for flexible installation.

Piston & Seal

Redesigned piston shaft minimises the wear on the piston significantly when compared to the previous model, bringing major improvements to the lifetime of the valve. The seal remains the same proven design which allows it to reliably seal at low pressure.

Convert the Non-Return Valve to a Foot Valve by adding the easy-fit filter to protect the valve from debris.

Flow Path

Improved flow path minimising turbulent zones.

High Pressure Rating

Foot and non-return valves are rated to 1600 kPa (static shutoff) to meet the requirements of high pressure systems.

Quality Materials

Manufactured from lightweight high performance thermoplastic materials which have excellent impact, UV and corrosion resistance. The material is non-toxic and taint free.

1 Apply PTFE tape or approved sealant to the male thread the non-return/foot valve is to be screwed onto. Sufficient tape needs to be applied to ensure a water tight seal.

2 Screw the valve onto male thread by hand until firm. Confirm the correct orientation of the valve by checking the water direction arrow is pointing downstream.

3 Using a pipe wrench or multi-grips on the end caps only, further screw the non-return/foot valve onto the male thread until tight. Where necessary ensure the male thread is held stationary to avoid it from moving. Do not use pipe wrench or multi-grips on the body of the non-return/foot valve.

Ratio Pressure Reducing Valves

Reliable and effective control of service line pressure

Philmac's ratio pressure reducing valves are designed to control service line pressure in fixed head water systems and have been doing so for over 50 years.

Their simple but effective operation means they can protect downstream pipe work, fittings and appliances from the effects of excess water pressure. With a fixed non-adjustable ratio it means the valve does not require adjusting and is tamper proof.

Ratio valves are manufactured from high grade materials to provide reliable operation and a high level of corrosion resistance. Not only are spare parts available but these valves are backed by a full maintenance service.

Philmac's range of ratio valves are designed to handle situations where reliable, controlled high pressure operation is essential.

Serviceable

The valves have been designed to be fully serviced and repair kits containing all the seals, o-rings and instructions are readily available.

High Flow Rates

Due to the internal design when the valve is fully open it allows full flow of water.

High Pressure Shut off

The ratio pressure reducing valves are rated to 35 bar at 20 degrees centigrade. However they can be rated to 50 bar if required by specific application.

Multi-position Installation

The valves have been designed to work in either vertical or horizontal position for flexible installation.

Maintained Pressure

Under no flow conditions the downstream pressure is maintained because the valve remains closed and it will not open until the downstream pressure drops when installed in a fixed head system.

Simple Sealing Action

Because the valve relies on only one moving part it means the valve has high reliability and shuts off when required. There are no internal ports which can become blocked or springs that can become corroded.

Connection Flexibility

To make installation easy Philmac offer both threaded (up to 2") and flanged connections (up to 6"). Flanged connections are available in almost any flange pattern including DIN, ANSI, BS or AS standards.

Tamperproof

There are no external regulators or pilot tubes which can be tampered with so once the valve is installed it will continue to operate at its pre set ratio.

Quality Materials

The screwed ratio valves are made from DZR brass meaning the valves have a high resistance to corrosion in solid and water environments. The flanged ratio valves are manufactured from gunmetal which again provides a high degree of corrosion resistance and strength. Please note different materials can be used if specific application requirements require it.

BSP Threaded Fittings

Versatile threaded solutions you can trust

Philmac's robust threaded fittings provide precision BSP tapered threads that have been engineered to maximize sealing performance.

The versatile range is made from high performance, UV resistant polypropylene that prevents moisture absorption, ensuring installation is quick, simple and reliable every time.

Philmac's threaded fittings provide maximum versatility, delivering a high performance connection across a wide range of pressure ratings and chemical combinations. The hexagonal body makes them extremely simple to install.

Importantly, Philmac threaded fittings are suitable for working pressures up to PN16 (1600kPa, 235psi) for sizes up to 2", PN12 (1200kPa, 175psi) for 2-1/2" and PN10 (1000kPa, 145psi) for 3" and 4" sized fittings. The comprehensive range includes plugs, bushes, nipples, sockets, tees, elbows, tank outlets, MF elbows and caps.

Quality Materials

Philmac threaded fittings are manufactured for high quality materials that ensure strength of joint over many years. The material also has a high degree of UV resistance to ensure long term performance even in direct sunlight.

Reliable, high quality threads

Philmac threaded fittings are manufactured in accordance to the company's ISO9001 quality endorsed standard. When using a Philmac BSP threaded fitting you can be sure thread is to standard and will work every time.

Hexagonal Design

Smart hexagonal design makes the fittings compatible with tools and ensures that Philmac BSP threaded fittings are extremely easy to install.

Wide Range

Philmac threaded fittings are available in sizes up to 4" and also in the full range of configurations to ensure Philmac have the correct fittings for your application requirements.

BSP THREADED FITTINGS

RANGE INFORMATION

Micro Irrigation

STAKES

Stakes are used to provide a stable platform to attach a sprinkler or jet. They also provide some elevation above the plants and provide a more efficient irrigation. Stakes are available with heads for micro sprinklers or jets while some allow flexible tubing or rigid risers to be attached to them.

JETS – Fixed Flow (up to 100 L/h)

Jets provide a fan or multi-stream pattern up to a 2 metre radius. Available with a variety of arcs including 90°, 180° and 360°. Recommended for the irrigation of vegetables, garden beds, nurseries etc. Ideal where fixed flow rates are required at specified pressure.

JETS – Adjustable Flow (0 - 80 L/h)

These feature an adjustable knob or cap which allows the flow and diameter to be varied. Used in residential gardens, flower beds, ground covers, shrubs and trees, the adjustable precipitation rates are ideal for areas where water control is required.

MINI SPRINKLERS (up to 300 L/h)

Provide larger diameter throws up to 6 metre radius. Used in orchards, vegetables and gardening as well as green-houses and shade houses. Also recommended for cooling in agriculture systems. Available in anti-insect system.

STATIC FITTINGS

These fittings are used to connect LDPE pipe from 10 to 32 mm in diameter. The sharp barbs bite into the pipe to retain the pipe on the fitting.

RATCHET OR TUBE CLIPS

These hold the pipe tightly onto the shank of the static fitting and assist in preventing the pipe from pulling off under pressure.

DRIPPERS – Fixed Flow (up to 8 L/h)

A turbulent flow path dripper sealed to maintain pre-set discharge rates and uniformity. Recommend for gardens and flatter agricultural areas.

MICRO FITTINGS

Typically manufactured in sizes smaller than 10 mm they are used to join flexible PVC and LDPE tubing. Small micro-valves are also available to suit some sizes.

DRIPPERS – Fixed Flow Pressure Compensating (up to 8 L/h)

The pressure compensating drippers provide each plant with a constant discharge independent of the pressure. It is an ideal dripper for crops that require precision irrigation. Ideally suited to areas with variable topography or long runs.

DRIPPERS – Adjustable Flow (0 - 40 L/h)

These feature an adjustable cap which allows the flow to be varied. Used in residential gardens, flower beds, ground covers, shrubs and trees, the adjustable precipitation rates are ideal for areas where.

VALVES – Quick Action

With a quarter turn from off to on these valves control water distribution within the irrigated area. They can also be used as a flushing valve on the end of lines

MICRO IRRIGATION	SIZE	BAG QTY
BN34	3/4" BSP Blank Nut with washer	25
BN10	1" BSP Blank Nut with washer	25

END PLUGS

MICRO IRRIGATION	SIZE	BAG QTY
EP38	End plug 10 mm	25
EP12	End plug 13 mm	25
EP58	End plug 16 mm	25
EP34	End plug 19 mm	25
EP10	End plug 25 mm	25
EP114	End plug 32 mm	25

SEALING SLEEVES

MICRO IRRIGATION	SIZE	BAG QTY
SS12	13 mm end sealing sleeve	25
SS58	16 mm end sealing sleeve	25
SS34	19 mm end sealing sleeve	25

Alternative to End Plug. Fold PE tube back and forth to seal, secure with Sealing Sleeve

PIPE SADDLE CLAMPS

MICRO IRRIGATION	SIZE	BAG QTY
PC13	Pipe saddle 13 mm	100
PC34	Pipe saddle 19 mm	100
SR4	Riser Tube Saddle	100

TUBE CLIPS

MICRO IRRIGATION	SUITS POLY TUBE	MINIMAL TUBE DIAMETER	BAG QTY
CT10		10 mm	50
CT13	10 mm	13 mm	100
CT15	13 mm	15 mm	100
CT17		17 mm	100
CT19	16 mm	19 mm	100
CT20		20 mm	50
CT23	19 mm	23 mm	100
CT24		24 mm	100
CT29	25 mm	29 mm	100
CT32		32 mm	50
CT37	32 mm	37 mm	100
CT40		40 mm	50

MICRO IRRIGATION In-Line Valves

RANGE INFORMATION

Take-Offs and Grommets MICRO IRRIGATION

RANGE INFORMATION

VALVE QUICK ACTION

Barb x Barb

MICRO IRRIGATION	SIZE	BAG QTY
VQA38	Quick Action Shut Off Valve 10 mm tails (Black ring)	20
VQA12	Quick Action Shut Off Valve 13 mm tails (Black ring)	20
VQA58	Quick Action Shut Off Valve 16 mm tails (Black ring)	20
VQA34	Quick Action Shut Off Valve 19 mm tails (Red ring)	20
VQA10	Quick Action Shut Off Valve 25 mm tails (Green ring)	20

Philmac recommend the use of Ratchet Clips with valves

VALVE QUICK ACTION

Barb x Male Thread

MICRO IRRIGATION	SIZE	BAG QTY
VT1212	Valve quick action 13 mm barb x 1/2" BSP male (1/2" MPT)	50
VT1234	Valve quick action 13 mm barb x 3/4" BSP male (3/4" MPT)	50
VT5812	Valve quick action 16 mm barb x 1/2" BSP male (1/2" MPT)	50
VT5834	Valve quick action 16 mm barb x 3/4" BSP male (3/4" MPT)	50

Philmac recommend the use of Ratchet Clips with valves

Pressure Controllers and Filters

PRESSURE CONTROLLER

Threaded inlet and outlet

MICRO IRRIGATION	SIZE	BAG QTY
SPPR10	10 psi Regulator. 3/4" Male Inlet x 3/4" Female Outlet (Bulk Pack)	1
SPPR15	15 psi Regulator. 3/4" Male Inlet x 3/4" Female Outlet (Bulk Pack)	1
SPPR20	20 psi Regulator. 3/4" Male Inlet x 3/4" Female Outlet (Bulk Pack)	1
SPPR30	30 psi Regulator. 3/4" Male Inlet x 3/4" Female Outlet (Bulk Pack)	1

FILTERS

with 50 Mesh 'B' cartridge

MICRO IRRIGATION	SIZE	BAG QTY
1-IS-12BB	Black Case - 13 mm tails with both ends	1
1-IS-58BB	Black Case - 13 mm tails with both ends	1
1-IS-34BB	Black Case - 13 mm tails with both ends	1
1-IS-10BB	Black Case - 13 mm tails with both ends	1

Includes I-IS-B black case, 2 end caps and BC-50 50 mesh filter

CASES ONLY

MICRO IRRIGATION	SIZE	BAG QTY
1-IS-B	150 mm Black Case 1" BSP male thread both ends - (Bulk Pack)	20
1-IS-C	150 mm (Poly Carbonate) Clear Case 1" BSP male thread both ends (Bulk pack)	20

FILTER CARTRIDGES ONLY

MICRO IRRIGATION	SIZE	BAG QTY
AC-30	19 mm Dia. x 135 mm long, Cartridge 30 mesh (Coarse)	20
BC-50	19 mm Dia. x 135 mm long, Cartridge 50 mesh (Fine)	20

RIGID PIPE (eg PVC, MDPE, HDPE, GI etc)

GROMMET - DOUBLE FLANGED RUBBER

For thin walled PVC pipes only

MICRO IRRIGATION	SIZE	BAG QTY
GR56	8 mm I.D. Double Flange Rubber Grommet (to suit TO5612)	50
GR34	19 mm I.D. Double Flange Rubber Grommet (to suit TO3458, TO3434, TO3410, TO3114)	50

GROMMET - TOP HAT RUBBER

Suits any rigid pipe (PVC, MDPE, HDPE, GI etc)

MICRO IRRIGATION	SIZE	BAG QTY
GR12TH	13 mm I.D. Top Hat Rubber Grommet (to suit TO1234, TO1212)	50
GR58TH	16 mm I.D. Top Hat Rubber Grommet (to suit TO5812, TO5858)	50
GR34TH	19 mm I.D. Top Hat Rubber Grommet (to suit TO3458, TO3434, TO3410, TO34114)	50

TAKE-OFF

To suit 8mm ID Grommets

MICRO IRRIGATION	SIZE	BAG QTY
TO5612	Take Off - 8 mm grommet inlet x 13 mm poly tube	50

TAKE-OFF

To suit 13mm ID Grommets

MICRO IRRIGATION	SIZE	BAG QTY
TO1212	Take Off - 13 mm grommet inlet x 13 mm poly tube	50
TO1234	Take-off - 13 mm grommet inlet x 19 mm poly tube	50

TAKE-OFF

To suit 16mm ID Grommets

MICRO IRRIGATION	SIZE	BAG QTY
TO5812	Take-off - 16 mm grommet inlet x 13 mm poly tube	50
TO5858	Take-off - 16 mm grommet inlet x 16 mm poly tube	50

TAKE-OFF

To suit 19mm ID Grommets

MICRO IRRIGATION	SIZE	BAG QTY
TO3458	Take-off - 19 mm grommet inlet x 16 mm poly tube	50
TO3434	Take-off - 19 mm grommet inlet x 19 mm poly tube	50
TO3410	Take-off - 19 mm grommet inlet x 25 mm poly tube	50
TO3414	Take-off - 19 mm grommet inlet x 32 mm poly tube	50

LDPE PIPE -DIRECT INSERTION

MICRO IRRIGATION	SIZE	BAG QTY
TO0610	6 mm tail x 10 mm tail take off adaptor	50
TOE0610	6 mm x 10 mm 90° take off elbow adaptor	50

MICRO IRRIGATION

Micro Fittings for 4 & 5mm Tube

RANGE INFORMATION

MICRO IRRIGATION

Rigid Pipe Risers & Tube

RANGE INFORMATION

COUPLER/JOINER/ADAPTORS

Adaptors inserted into side of thin walled poly tube Joiner/Couplers to join lengths of tube

MICRO IRRIGATION	SIZE	BAG QTY
JAT	Adaptor 4 mm x 4 mm threaded	100
A4BT	Adaptor 4 mm barbed x 4 mm threaded	100
JAB	Adaptor/Joiner 4 mm x 4 mm barbed tails	100
A05	5 mm tail x 5 mm tail adaptor	50
TO0505	5 mm tail x 5 mm tail take off adaptor (high flow - red)	50

COUPLER/JOINER REDUCER

MICRO IRRIGATION	SIZE	BAG QTY
AB54	Adaptor/Reducing 5 mm x 4 mm barbed tails	100

TEE

MICRO IRRIGATION	SIZE	BAG QTY
T3M4M	Tee 3 mm and 4 mm barbed (Dual size barbs)	100
TB4	Tee 4 mm barbed	50

ELBOW

MICRO IRRIGATION	SIZE	BAG QTY
EB4	Elbow 4 mm barbed	50

CROSS

MICRO IRRIGATION	SIZE	BAG QTY
CB4	Cross 4 mm barbed	50

REPAIR PLUGS

MICRO IRRIGATION	SIZE	BAG QTY
PG4	Repair Plug 4 mm	100
PR5	Repair Plug 5 mm	100

FLOW CONTROL VALVE

MICRO IRRIGATION	SIZE	BAG QTY
V4T	Flow Control Valve 4 mm threaded	50

RISER ADAPTOR

MICRO IRRIGATION	SIZE	BAG QTY
A1204	Poly Riser Jet Adaptor 1/2" female x 4 mm	25

To connect a 1/2" threaded pipe to 4 mm tube

4 mm RIGID RISER TUBE

Complete with 4 mm Threaded adaptor

MICRO IRRIGATION	SIZE	BAG QTY
RGR200	Rigid Riser Tube 200 mm with Adaptor (JAT)	100
RGR300	Rigid Riser Tube 300 mm with Adaptor (JAT)	100
RGR450	Rigid Riser Tube 450 mm with Adaptor (JAT)	100

4 mm (nominal) FLEXIBLE PVC THICK-WALLED TUBE

MICRO IRRIGATION	SIZE	BAG QTY
FR5/39	Multiflex Riser Tube 3.9 mm x 5 metre coil	1
FR25/39	Multiflex Riser Tube 3.9 mm x 25 metre coil	1
FR50/39	Multiflex Riser Tube 3.9 mm x 50 metre coil	1

5 mm FLEXIBLE PVC THICK-WALLED TUBE

MICRO IRRIGATION	SIZE	BAG QTY
FR50/5	Multiflex Riser Tube 5 mm x 50 metre coil	1
